INTRODUCTION

Health and Addictions Research annually prepares this report, which provides a socio-demographic profile of admissions to publicly-funded substance abuse treatment during the preceding fiscal year for the five Regions and twenty seven Community Health Network Areas (CHNAs) in Massachusetts. Data for this report come from the Bureau of Substance Abuse Service's (BSAS's) client MIS.¹ The report is composed of this introduction and three tables. The first table—pages 3 through 5—presents a detailed Regional breakdown of the socio-demographic characteristics of admissions to publicly-funded substance abuse treatment. The second table—pages 6 through 20—presents a detailed breakdown by Region and CHNA of the socio-demographic characteristics of admissions to publicly-funded substance abuse treatment. The third table—pages 21 through 25—lists the cities, towns, and correctional institutions in each CHNA and region.

This current report is for Fiscal Year 1995 (FY 1995).² There were a total of 104,148 admissions to BSAS-funded substance abuse treatment in FY 1995, including 102,392 primary and 1,756 collateral admissions³ to treatment. This report includes only data on the 102,392 primary admissions. Unlike some previous reports on CHNAs, this report includes a separate tabulation for the 2,696 primary admissions who were in correctional institutions or were not Massachusetts residents.

This report provides information on seventeen variables describing admissions to publicly-funded substance abuse treatment during fiscal year 1995. The seventeen variables are:

1. **Correctional status**—the number of admissions who were prisoners.
2. **Gender**—the number of male and female admissions.
3. **Age**—the number of admissions who were under 18, 18 to 20, 21 to 29, 30 to 39, 40 to 49, 50 to 59, and 60 or older.
4. **Race**—the number of admissions who were Asian, Black Non-Latino, White Non-Latino, Latino, or Other race.

¹ Every substance abuse treatment program in Massachusetts that receives any funding from BSAS is required to complete an admission form for every client they treat and submit the data from this form to BSAS. BSAS enters these data into their client MIS system where they are available for subsequent analysis. MIS data include information on treatment clients' demographics, socio-economic status and substance abuse history. See Camp, J. M., Krakow, M., McCarty, D., and Argeriou, M., 1992. "Substance abuse treatment management information systems: Balancing Federal, State and Service Provider Needs", pages 5-20, *The Journal of Mental Health Administration* 19:1, for further details.

² The fiscal year in Massachusetts runs from July 1 through June 30. Since this report is for FY 1995 it covers the period from July 1, 1994 through June 30, 1995.

³ Collateral admissions are not seeking substance abuse treatment for themselves but are seeking help in dealing with issues that they are facing, regarding someone else's substance abuse.

5. **Ethnicity**—the number of admissions who were of Latino, Portuguese, Asian, or Other ethnicity.
6. **Marital Status**—the number of admissions who were never married, married, separated, divorced, or widowed.
7. **Education**—the number of admissions who had less than a high school education, completed high school, or had education beyond high school.
8. **Employment Status**—the number of admissions who were working or not working.
9. **Homeless Status**—the number of admissions who were living in a residence—house, apartment, room, boarding house, institution, or group home—or on the streets, at a shelter, or at a mission.
10. **Mental Health Treatment**—the number of admissions who had no prior mental health treatment, had an apparent mental health problem, had received counseling, had a prior mental health hospitalization, or had more than one prior mental health hospitalization.⁴
11. **Pregnancy**—the number of admissions who were pregnant.
12. **Alcohol Use**—the number of admissions who used alcohol in the year preceding admission.
13. **Cocaine Use**—the number of admissions who used cocaine in the year preceding admission.
14. **Crack Use**—the number of admissions who used crack in the year preceding admission.
15. **Marijuana Use**—the number of admissions who used marijuana in the year preceding admission.
16. **Heroin Use**—the number of admissions who used heroin in the year preceding admission.
17. **Needle Use**—the number of admissions who injected drugs in the year preceding admission.⁵

⁴ While we do not have an actual dual diagnosis designation, BSAS has used one or more hospitalizations for mental health problems as an indicator of dual diagnosis. One can add the numbers of admissions who had a prior mental health hospitalization, or who had more than one prior mental health hospitalization to get the number of admissions with this indicator of dual diagnosis.

⁵ These are the same data that can be found in CHNA Reports under the variable “injection drug user admissions to programs”.
